PROJECTS

[Crypto Portfolio App](#) | Self Project

Sept 2024 - Present

Built a full-stack Web3 platform combining live crypto market tracking with on-chain ERC-20 token transfers and blockchain event indexing

- Architected a scalable full-stack cryptocurrency portfolio tracker using **React.js, Node.js, and Tailwind CSS** for a responsive, real-time UI
- Integrated **ethers.js and MetaMask** to enable wallet-based authentication and secure blockchain interaction
- Connected a **Solidity-based ERC-20** smart contract to simplify approval workflows and execute token transfers securely
- Built a **backend event listener** syncing on-chain transaction activity to **MongoDB**, keeping dashboard data usable even if the **RPC layer** fails

BuyChai - Web3 dApp | Self Project

[GitHub](#) | [Live Demo](#)

Built and deployed a decentralized application where users send ETH with an on-chain message to support creators

- Deployed a **Solidity smart contract** on Sepolia, forwarding tips to the owner while immutably logging sender, message & timestamp onchain
- Automated the full contract lifecycle with **Hardhat**- compilation, deployment scripting, and exporting the ABI into the React frontend

Aira - AI Multilingual Interview Coach | AI For Bharat Hackathon (AWS)

Mar 2026 - Apr 2026

AI-native interview coach delivering real-time, bilingual candidate evaluation.

- Engineered **RAG and agentic workflows** to evaluate candidate responses in real time, advancing project to the hackathon's pre-final round
- Built Hinglish code-switching recognition, widening accessibility and improving live-session accuracy for **bilingual** candidates
- Deployed a backend on **AWS Lambda** and a real-time confidence meter with automated resume scanning for detailed candidate feedback

Cash Flow Minimizer | Self Project

May 2025 - Jun 2025

C++ system minimizing inter-bank cash flow through graph modeling and net balance optimization

- Modeled transactions as a directed graph and designed a **greedy algorithm** matching top creditors with top debtors to minimize settlement
- Handled cross-bank payment mismatches via intermediary fallback, using custom **OOP** and **STL** to cut settlement transactions by **~40%**

INTERNSHIP

SRIC, IIT Kharagpur | Web Development & Deployment Intern
